Franco,

After inspecting the Ferrari 12 cylinder lampredi engine on the 23 of March, installed in Ferrari 0242AL, in Italy, I needed to return home to understand the project better. I did some measurements, located some additional parts, organized the pieces and personnel to repair the engine. After 6 weeks, everything has arrived at my shop and I am ready to get started. My work load is currently light and I can do necessary repairs immediately to the engine.

An estimate of my services is slightly higher than we discussed. I am currently estimating \$100,000 USD and 2-3 weeks to accomplish my work.

I will be getting busy with Monterey in early July, so please expedite the engine delivery.

Please call with any questions.

Thank You,

Tom Shaughnessy
